# Report about Web Development

I have created my website using HTML and CSS and a bit of java. I got help from w3schools and I checked up on a lot of youtube tutorials to make the website the finest I can. The homepage is a very minimalistic Dashboard type of homepage with just images of AMDT and when you hover it, a text defining the image. All the pages consist of a navigation, a header(amdt logo) and a footer. The navigation bar is fixed on the left side of each page, the header (amdt logo) is always on the top right corner with a bit of an animation and it redirects you to the homepage when you click it, and a footer with the address of AMDT, contact number and social media links of AMDT. I have used very simple subtle ways of designing the website, this is because I feel that a college website should be very simple since visitors of different age groups would visit and to make them feel that the website is easy to redirect and follow up on.
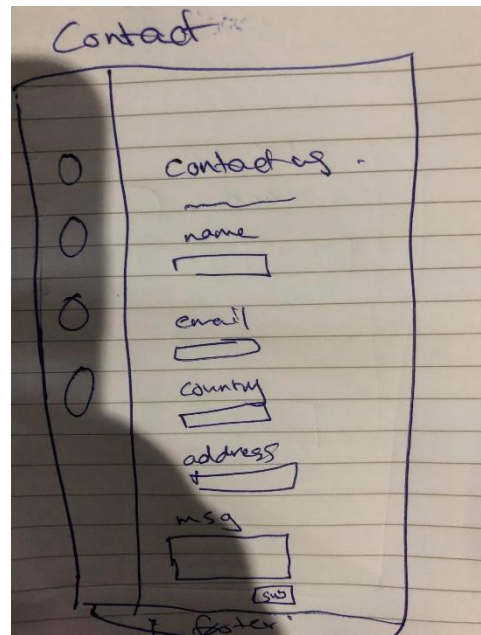

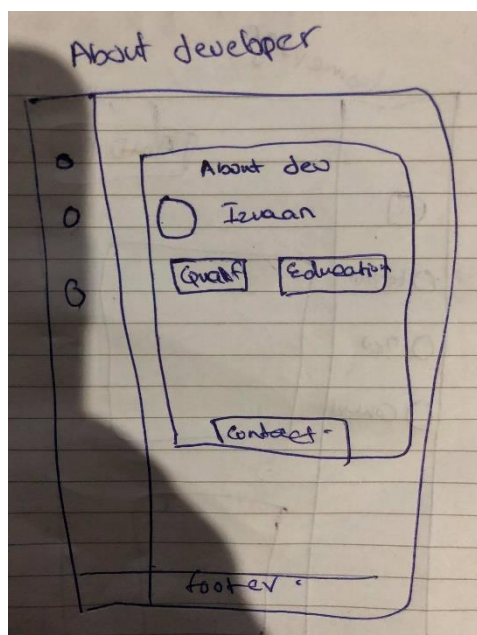

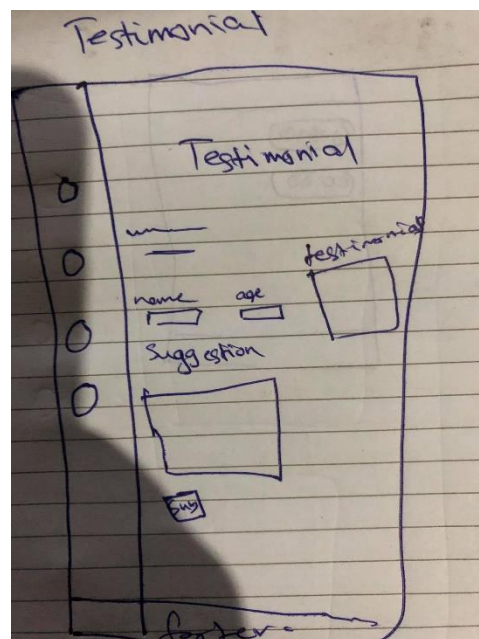

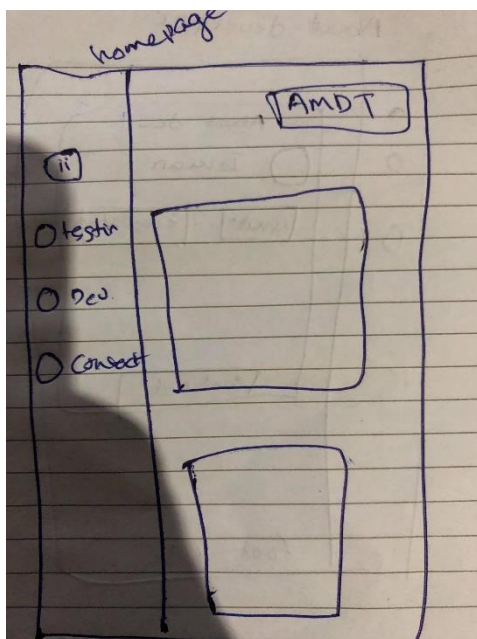

Wireframes of the website

I have used "Aesthetics and minimalistic designs" and "Help and documentation" usability principles of Jacob Nielsen.

In this picture, there is the placeholder texts to show help. For example, some people might write their first name in the name field or write an incomplete email to overcome this issue, I have used this usability principle of putting placeholder as a help.
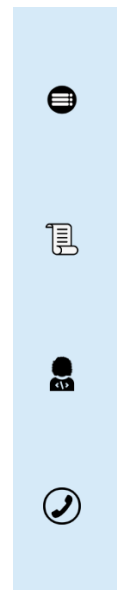

In this picture, there are icons indicating the navigation to other pages. The top icon when you click it shows what other icons stand for just in case the visitor of the website is confused. This is the second usability principle of Jacob Nielson that I have used. (minimalistic designs)

One of my friends came to check up on this assignment of mine. I showed him the website and the following is the feedback he gave me through Whatapp.

I have tried my best to work with what I could in a way that I know by following tutorials and researches about this. I believe that there are a lot of poor sections in this assignment like the feedback has mentioned.

Can you give me the feedback?

I like the website and it's easy to look around and play with it. There are some fun cool features you have added as well. I like the minimalism a lot. Instead of including too many words, it's simple and nice.
But the problem is that the emails doesn't go in the contact page and the testimonial page whatever I submit does not appear. Also the responsiveness to mobile devices is not good. These are my negative reviews of the website
